SUMMARY

Software engineer with 5 years of experience building SaaS and EdTech platforms. Skilled at delivering clean, responsive interfaces and scalable backend systems using modern JavaScript/TypeScript frameworks. Experienced in SaaS migrations, subscription and payment flows and live learning features. Passionate about developer experience, performance optimization and creating products that have meaningful impact on users. Currently co-founder and QA engineer of an AI-agent-orchestrated commerce platform, and solo lead of a full-stack community platform (membership, ticketing, analytics).

EXPERIENCE

Stealth — Co-founder & QA Engineer

Aug 2026 – Present

- Test and harden a multi-tenant commerce platform built by fleets of AI coding agents, finding and fixing the integration bugs that volume-at-speed development lets through.
- Fixed OAuth scope and credential-linking bugs blocking Meta/Instagram/WhatsApp messaging integrations, restoring merchant inbox replies.
- Fixed a shipping-carrier webhook handshake and simplified an address-booking flow for the Pathao integration, plus added cancel-shipment support to the carrier interface.
- Fixed a session bug where the mobile SSE stream silently dropped the web login cookie.
- Wrote a manual PSP sandbox runbook and review checklist to give third-party payment integrations a repeatable test path.

Ngaze, Inc. — Software Engineer

Dec 2022 – Aug 2026

- Collaborated on multi-tenant SaaS architecture implementing subdomain routing, organization on-boarding and tenant-aware UIs that enabled segmented deployments for different institutions.
- Built core Learning Management System features including classroom workflows, lesson sequencing, progress tracking and live interactions that improved student engagement and teacher visibility.
- Supported monetization initiatives by integrating subscription management and payment gateways, contributing to the platform's revenue streams.
- Enhanced platform usability by migrating styles to Tailwind CSS, adding dark mode, improving accessibility and developing a Lexical-based in-platform editor.
- Improved engineering culture through code reviews, TypeScript + Fastify best practices and mentoring junior developers, ensuring consistency and maintainability across the team.

Ngaze, Inc. — Junior Software Engineer

Sep 2021 – Nov 2022

- Focused on frontend engineering, building admin dashboards, contest forms and community features using React, Next.js and SCSS.
- Translated Figma designs into responsive UIs, ensuring cross-browser compatibility and mobile-friendly layouts.
- Integrated REST APIs in collaboration with backend engineers, handling validation, loading states and error management.
- Developed interactive community modules (post creation, threaded comments and voting) to improve user engagement.
- Improved design consistency by scaling shared UI libraries across web and admin apps.

- Contributed to team processes through sprint planning, Jira task management and code reviews.

OPEN SOURCE

Pathao Merchant SDK

github.com/Sifat07/pathao-merchant-sdk · *npm: pathao-merchant-sdk*

- Unofficial, type-safe Node.js and TypeScript SDK for the Pathao courier Merchant API: orders, stores, price calculation, locations, webhook signature verification and automatic OAuth2 token refresh. MIT licensed, with Jest tests and CI.

PROJECTS

Peña Madridista Bangladesh

pmadridistabd.com · *Next.js, Tailwind CSS, TypeScript, Fastify, Prisma, SQL, AWS S3*

- Community platform for Real Madrid fans in Bangladesh, with a membership system for over 5,000 registered fans, article writing, ticket allocation and event management.
- Own feature development end to end, including an in-house analytics and notifications system, plus data-integrity, security and CI hardening (audit-trail fixes, order-oversell prevention, log-retention crons).

Madridismo Corner

madridismocorner.com · *Next.js, Supabase, Tailwind CSS, TypeScript, Pathao SDK*

- E-commerce platform for Real Madrid merchandise, with custom admin dashboards for order processing and inventory management.

Dollabills

PHP, Laravel, JavaScript, AWS Chime, S3, WebRTC, WebSocket

- Social platform with real-time chat and video conferencing. Contributed to frontend development: fixed broken UIs, improved responsiveness and refined user flows.

Inventory & HR Management System

Next.js, TypeScript, Express.js, TypeORM, MySQL

- Inventory and HR solution with role-based access. Led the complete frontend implementation, from design to integration with the backend APIs.

EDUCATION

- **MIT: Information Technology** — 2021, Institute of Information Technology, University of Dhaka
- **B.Sc. in Computer Science & Engineering** — 2018, American International University-Bangladesh

SKILLS

- **Frontend:** React, Next.js (Pages/App Router), TypeScript, SCSS, Tailwind CSS.
- **Backend:** Fastify, Express.js, Prisma ORM, SQL (MySQL).
- **Architecture & DevOps:** Turborepo, pnpm monorepos with shared UI libraries; CI/CD via GitHub Actions, Docker, GCP.
- **UI/UX & DX:** Accessibility-first design, dark mode, Framer Motion/Lottie animations.
- **Collaboration:** Agile sprints, async teamwork, code reviews, mentoring juniors, technical documentation.
